

Roadmap

- Formatting Elements
- **Box**
- Layout

Box Model (1/2)

- In CSS, the term "box model" is used when talking about design and layout.
- The CSS box model is essentially a box that wraps around every HTML element. It consists of: margins, borders, padding, and the actual content.

Box Model (2/2)

- The actual full width of the box is the value of width + padding + border, excluding margin.
- If you want to set the width to 100px in a box with a border thickness of 2px and padding of 5px, you need to set the width of content to 86px.

$$2\text{px}(\text{left-border}) + 5\text{px}(\text{left-padding}) + 86\text{px}(\text{content}) + 5\text{px}(\text{right-padding}) + 2\text{px}(\text{right-border})$$

$$= \{ 2\text{px}(\text{border}) + 5\text{px}(\text{padding}) \} * 2 + 86\text{px}(\text{content}) = 100\text{px}$$

Example

Understanding CSS Box Model

The CSS3 box model consists of content, padding, border and margin.

- What is the width of div tag?

$$= 320\text{px}(\text{width}) + 10\text{px}(\text{left padding}) + 10\text{px}(\text{right padding}) + 5\text{px}(\text{left border}) + 5\text{px}(\text{right border})$$

$$= 350\text{px}$$
- What is the width of img tag?

$$= 340\text{px}(\text{width}) + 5\text{px}(\text{left border}) + 5\text{px}(\text{right border}) = 350\text{px}$$

```

1 <html>
2 <head> <title>Box Model</title>
3 <style>
4   img{width : 340px; height : 260px; border : 5px solid green;}
5   div {width : 320px; padding : 10px; border : 5px solid blue; margin : 0;}
6 </style>
7 </head>
8 <body>

Width & Height Properties

- Sets the width and height of an element

Value	Description
<code>auto</code>	Default value. The browser calculates the width
<code>length</code>	Defines the width in px, em etc. <code>width: 10em</code>
<code>%</code>	Defines the width in percent of the containing block

```
p.ex { height: 100px; width: 50%; }
```

Padding Property (1/2)

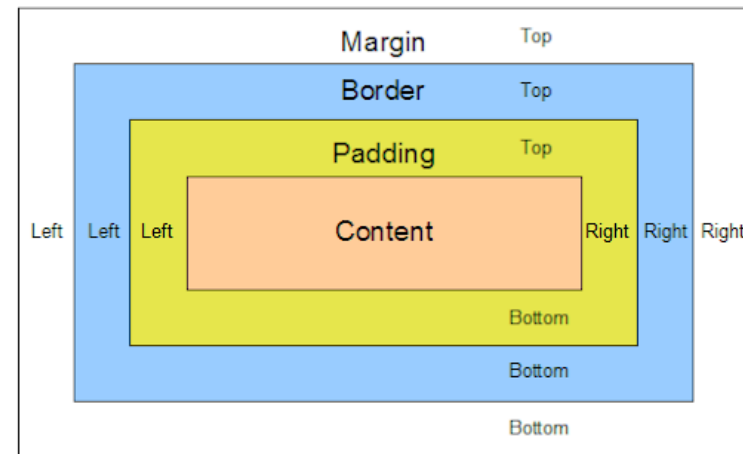

- Sets all the padding properties in one declaration

Property	Description
<code>padding-top</code>	Sets the top padding (space) of an element, e.g., 20px
<code>padding-right</code>	Sets the right padding (space) of an element
<code>padding-bottom</code>	Sets the bottom padding (space) of an element
<code>padding-left</code>	Sets the left padding (space) of an element

```

1 <style>
2   div { border: 1px solid black;
3         background-color: lightblue;
4         padding: 20px 30px 40px 50px; }
5 </style>
6 <body>
7   <div>
8     <div>This div element has a top padding of 50px, <br>
9       a right padding of 30px, a bottom padding of 50px, <br>
10      and a left padding of 80px.</div>
11   </div>
12 </body>

```

```

div{
  padding-top:    20px;
  padding-right:  30px;
  padding-bottom: 40px;
  padding-left:   50px;
}

```

```

div{ padding: 20px 30px 40px 50px; }

```

Padding Property (2/2)

● Shortened properties of padding

```
div { padding: 5px 10px 15px 20px; }
```

↓ top ↓ right ↓ bottom ↓ left

```
div { padding: 5px 10px; }
```

↙ top & bottom ↘ right & left

```
div { padding: 10px; }
```

↓ top & right & bottom & left

Margin Property (1/2)

- Sets all the margin properties in one declaration

Property	Description
<code>margin-top</code>	Sets the top margin of an element, e.g., 20px
<code>margin-right</code>	Sets the right margin of an element
<code>margin-bottom</code>	Sets the bottom margin of an element
<code>margin-left</code>	Sets the left margin of an element

```

1 <style>
2   div { border: 1px solid black;
3         margin: 20px 60px 20px 60px;
4         background-color: lightblue; }
5 </style>
6 <body>
7   <div>
8     <div>This div element has a top margin of 20px, <br>
9       a right margin of 60px, a bottom margin of 20px,<br>
10      and a left margin of 60px.</div>
11   </div>
12 </body>

```

```

div{
  margin-top:    20px;
  margin-right:  60px;
  margin-bottom: 20px;
  margin-left:   60px;
}

```

```

div{ margin: 20px 60px 20px 60px; }

```

Margin Property (2/2)

● Shortened properties of padding

```
div { margin: 5px 10px 15px 20px; }
```

↓ top ↓ right ↓ bottom ↓ left

```
div { margin: 5px 10px; }
```

↘ top & bottom ↘ right & left

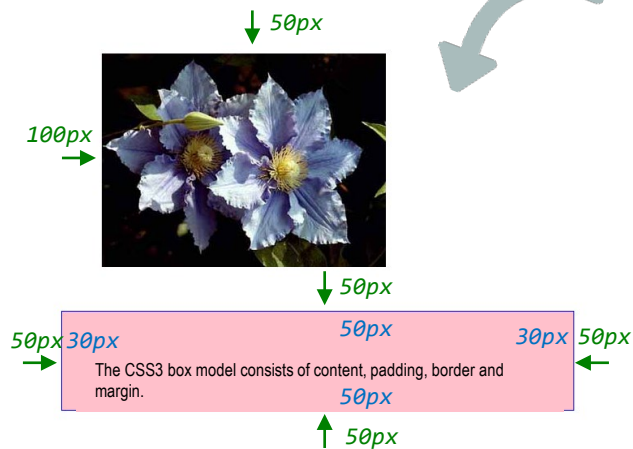

```
div { margin: 10px; }
```

↓ top & right & bottom & left

Example: Padding & Margin

Understanding CSS Box Model

```

1 <html>
2 <head> <title>padding & margin example</title>
3 <style>
4   img{margin-top : 50px; margin-left : 100px;}
5   div {background-color : pink; border : 5px solid blue;
6         padding : 50px 30px; margin : 50px;}
7 </style>
8 </head>
9 <body>
10  <h2>Understanding CSS Box Model</h2>
11  
12  <div>
13    The CSS3 box model consists of content, padding, border and margin.
14  </div>
15 </body>
16 </html>

```

save after editing ex5-5.html.

Border Property (1/3)

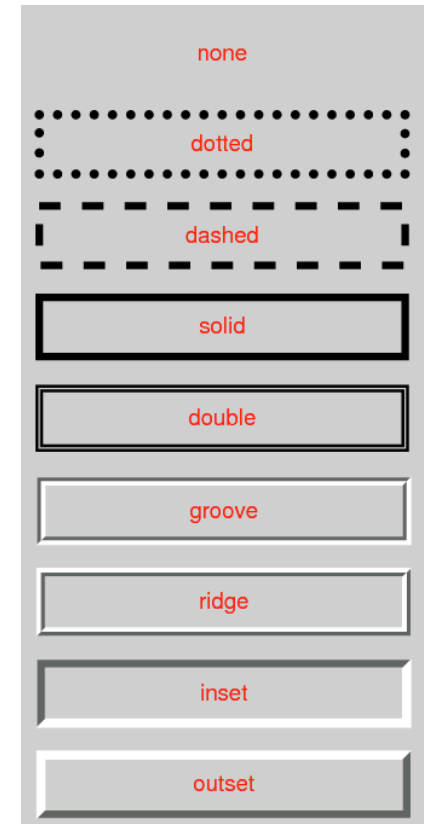

- Sets all the border properties in one declaration
- The border property is a shorthand property for:
 - border-width
 - border-style (required)
 - border-color
 - If border-color is omitted, the color applied will be the color of the text.

Border Property (2/3)

● Property values

Value / Property	Description
border-width	Specifies the width of the border, e.g., medium, thin, 10px
border-style	Specifies the style of the border e.g., none, solid, dotted, dashed, double, groove, ridge, inset, outset
border-color	Specifies the color of the border, e.g., red, #ff0000

✓ border-style property value

```
1 <style>
2   p { border: 5px solid red; }
3 </style>
4 <p>Some text</p>
```

```
p { border-left: 6px solid red;
    background-color: lightgrey; }
```

```
p { border-bottom: 6px solid red;
    background-color: lightgrey; }
```

Border Property (3/3)

- May set a different value for each border

```
1 <style>
```

```
2   p.one { border-top: 1px solid gray;
```

```
3           border-bottom: 2px dotted red; }
```

```
4 </style>
```

```
5 <p class="one">Some text</p>
```

Some text

```
p.one{
```

```
  border-top-width:  thin;
```

```
  border-right-width: medium;
```

```
  border-bottom-width: thick;
```

```
  border-left-width:  10px;
```

```
}
```

```
p.one{ border-width: thin medium thick 10px; }
```

```
1 <style>
```

```
2   p.one { border-style: solid;
```

```
3           border-width: thin medium thick 10px; }
```

```
4 </style>
```

```
5 <p class="one">Some text</p>
```

10px

Some text

thin

medium

thick

Example

```

1  <!DOCTYPE html>
2  <html>
3  <head>
4      <meta charset="utf-8">
5      <title>border 속성</title>
6  <style>
7      img { width:100px;
8             height:150px; }
9      .one { border-width:2px;
10             border-style:solid;
11             border-color:darkorange;}
12     .two { border-width:5px;
13             border-style:dotted;
14             border-color:darkgreen;}
15 </style>
16 </head>
17 <body>
18     <div class="one">
19         
20     </div>
21     <div class="two">
22         
23     </div>
24 </body>
25 </html>

```

(After editing ex5-6.html, save it as ex5-6-1.html)

Border Multi Property (1/3)

- Border properties can use top, right, bottom, and left to specify border properties only in the desired direction

```
div { border-top-width : 3px;
      border-top-style : dotted;
      border-top-color : red; }
```

```
div { border-top : 3px dotted red; }
```

```
1 <style>
```

```
2   div { border-top : 3px dotted red; }
```

```
3 </style>
```

```
4
```

```
5 <div>Some Text</div>
```

Some Text

Border Multi Property (2/3)

- Border properties can also be assigned different border properties in four directions

```
div { border-width: 3px 2px 1px 2px; }
```

top right bottom left

```
div {border-width : 3px 2px; }
```

top & bottom right & left

```
div {border-width : 2px; }
```

top & right & bottom & left

```
1 <style>
2   div { border-style: solid; border-color: green;
3         border-width: 1px 5px 2px 5px; }
4 </style>
5
6 <div>Some Text</div>
```

5px 1px 2px 5px

Some Text

Border Multi Property (3/3)

- Border-width, border-style, border-color properties are tied to specify shortened properties border

```
div { border-width : 3px;
      border-style : dotted;
      border-color : red; }
```

```
div { border : 3px dotted red; }
```

```
1 <style>
```

```
2   div { border : 3px dotted red; }
```

```
3 </style>
```

```
4
```

```
5 <div>Some Text</div>
```

Some Text

Exercise 5-1

```
.one{border-top: 5px dashed purple;
border-bottom: 7px double green;
margin: 5px}
```

```
.two{border-width: 2px 5px 10px 5px;
border-color: gold;
border-style: solid;
margin: 5px;}
```

```
.three{border-width: 5px 2px;
border-color: magenta;
border-style: solid;}
```

(After editing ex5-6-1.html, save it as **exercise5-1.html**)

Solution

```

1 <!DOCTYPE html>
2 <html>
3 <head>
4   <meta charset="utf-8">
5   <title>border 속성</title>
6   <style>
7     img{width: 150px; height: 200px;}
8     .one{border-top: 5px dashed purple;
9           border-bottom: 7px double green;
10          margin: 5px;}
11    .two{border-width: 2px 5px 10px 5px;
12         border-color: gold;
13         border-style: solid;
14         margin: 5px;}
15    .three{border-width: 5px 2px;
16           border-color: magenta;
17           border-style: solid;}
18  </style>
19 </head>

```

```

20 <body>
21   <div class="one">
22     
23   </div>
24   <div class="two">
25     
26   </div> <div class="three">
27     
28   </div>
29 </body>
30 </html>

```

(After editing ex5-6-1.html, save it as exercise5-1.html)

Border-Radius Property (1/3)

- The border-radius property in CSS is used to round the corners of the outer border edges of an element.
- This property can contain one, two, three, or four values.
 - Four values - border-radius: 15px 50px 30px 5px; (first value applies to top-left corner, second value applies to top-right corner, third value applies to bottom-right corner, and fourth value applies to bottom-left corner).
 - Three values - border-radius: 15px 50px 30px; (first value applies to top-left corner, second value applies to top-right and bottom-left corners, and third value applies to bottom-right corner).
 - Two values - border-radius: 15px 50px; (first value applies to top-left and bottom-right corners, and the second value applies to top-right and bottom-left corners).
 - One value - border-radius: 15px; (the value applies to all four corners, which are rounded equally).

Border-Radius Property (2/3)

- **border-radius** : Can round the edges of the border

```
div { border-radius : 50px; }
```

- All border-radius properties can be set differently

```
div { border-radius : 0px 20px 40px 60px; }
```

```
1 <style>
2   div { width:300px; height:100px;
3         border-style: solid; text-align:center;
4         color:white; background-color:green;
5         border-radius : 0px 20px 40px 60px; }
6 </style>
```

```
8 <div>
9   <br><br>
10  <strong>Rounded corner border</strong>
11 </div>
```

- Apply radius in clockwise order from ① to ④
- If ④ and ③ are omitted, the symmetric structure of the same radius as ② and ①

Border-Radius Property (3/3)

- One border-radius property can be specified.

border-radius : 50% ?

```

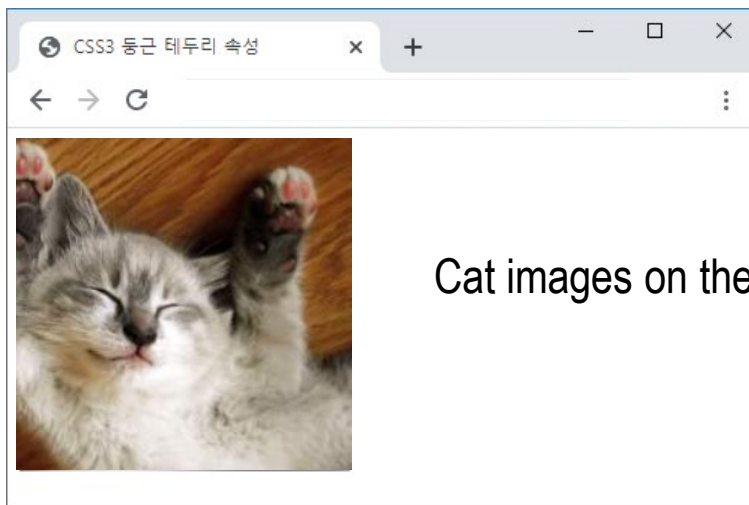

1 <head>
2   <style>
3     #left {
4       border-top-right-radius: 50%;
5       background: lightgreen;
6       padding: 50px;
7       border: 6px ridge red;
8       width: 300px;
9       height: 200px;
10      font-size: 25px;
11    }
12  </style>
13 </head>
14
15 <body>
16   <center>
17     <div id = "left">
18       <h2>Welcome to <br> WP class</h2>
19       <p>border-top-right-radius: 50%;</p>
20     </div>
21   </center>
22 </body>

```

save after editing ex5-7.html.

Example: Creating 2 Rounded Borders

image url : <https://placekitten.com/220/220>

(ex5-8.html)

Cat images on the site may differ from the original.

(ex5-8-1.html)

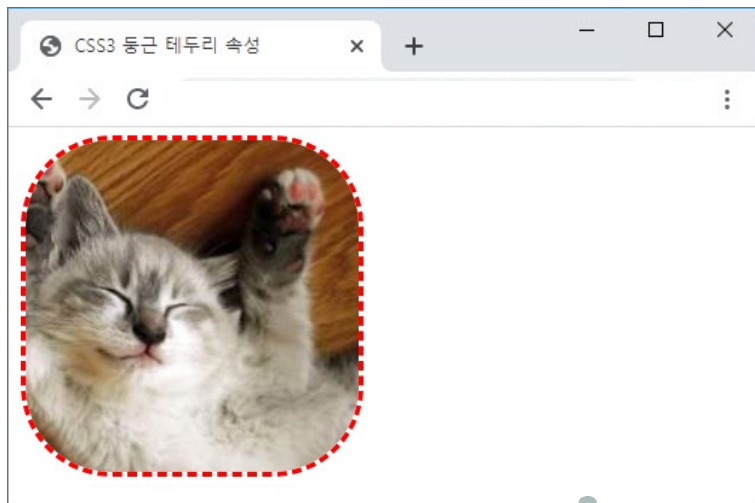

(ex5-8-2.html)

```
img{ border: 3px dashed red;
      border-radius: 60px; }
```

```
img{ border: 5px solid yellowgreen;
      border-radius: 50%; }
```

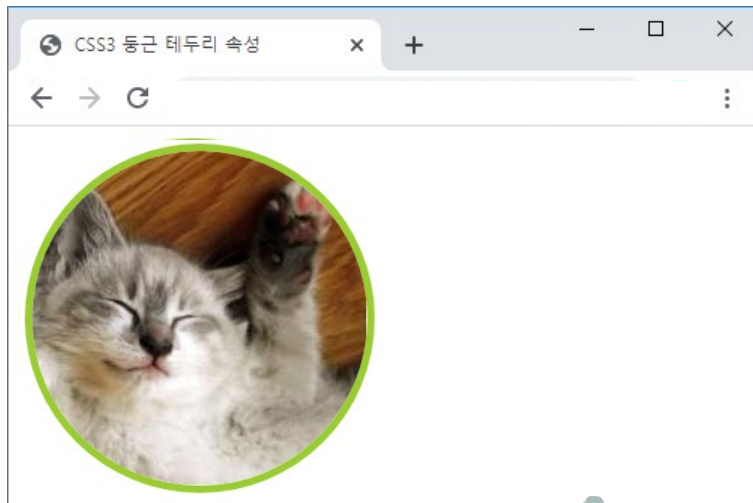

Solution

```
1 <!DOCTYPE html>
2 <html lang="ko">
3 <head>
4   <meta charset="UTF-8">
5   <title>CSS3 둥근 테두리 속성</title>
6   <style>
7     img{ border: 3px dashed red;
8         border-radius: 60px; }
9   </style>
10 </head>
11 <body>
12   <div>
13     
14   </div>
15 </body>
16 </html>
```

(ex5-8-1.html)

Solution

```

1  <!DOCTYPE html>
2  <html lang="ko">
3  <head>
4      <meta charset="UTF-8">
5      <title>CSS3 둥근 테두리 속성</title>
6  <style>
7      img{ border: 5px solid yellowgreen;
8          border-radius: 50%; }
9  </style>
10 </head>
11 <body>
12 <div>
13     
14 </div>
15 </body>
16 </html>

```

(ex5-8-2.html)

Exercise 5-2

```
.one{border-radius:50px;}
```

```
.two{border-radius:0px 20px 40px 60px;}
```

```
.three{border-radius:0px 30px;}
```

```
.four{border-radius:30px; border:5px dotted red;}
```

(After editing ex5-6-1.html, save it as exercise5-2.html)

Solution

```

1  <html>
2  <head> <title>border-radius exercise</title>
3  <style>
4      img {width : 150px; height : 200px;}
5      .one {border-radius : 50px;}
6      .two {border-radius : 0px 20px 40px 60px;}
7      .three {border-radius : 0px 30px;}
8      .four {border-radius : 30px; border : 5px dotted red;}
9  </style>
10 </head>
11 <body>
12      
13      
14 </body>
15 </html>

```

(After editing ex5-6-1.html, save it as exercise5-2.html)

Exercise 5-3

- Create the following web page using <div> tags
 - Outer box (id="div1") has properties:
 - width=10cm, border=solid, background=silver, padding=10px(top), 5px(left)
 - Inner box (id="div2") has properties:
 - border=dotted red, background=#20a020, padding=20px(t), 30px(r), 40px(b), 50px(l), margin=20px(t), 30px(r), 20px(b), 10px(l)
 - Set the font property:
 - italic, bold, 20pt, times

save it as exercise5-3.html

Background Property

- Sets all the background properties in one declaration

```
body { background: #00ff00 url("eagle.gif") center no-repeat fixed; }
```

Value / Property	Description
background-color :	Specifies the background color to be used
background-image :	Specifies one or more background images to be used
background-position :	Specifies the position of the background Images e.g., left top, left center, left bottom, right top, right center, right bottom, center top, center center, center bottom
background-size :	Specifies the size of the background images, e.g., 100px 100px
background-repeat :	Specifies how to repeat the background images e.g., no-repeat, repeat(default, repeat-x, repeat-y)
background-attachment :	Specifies whether the background images are fixed or scrolls with the rest of the page e.g., scroll fixed local initial inherit

Background-Repeat Property

- The background-repeat property sets if/how a background image will be repeated.
- By default, a background-image is repeated both vertically and horizontally.
- Tip: The background image is placed according to the background-position property. If no background-position is specified, the image is always placed at the element's top left corner.
- Property values

Value	Description
repeat	The background image is repeated both vertically and horizontally. The last image will be clipped if it does not fit. This is default
repeat-x	The background image is repeated only horizontally
repeat-y	The background image is repeated only vertically
no-repeat	The background-image is not repeated. The image will only be shown once
